

Increase Workflow Visibility

Lack of visibility can lead to missed deadlines, rushed decisions, and challenges effectively managing resources. Acquisition Management Workflow helps organizations to:

- Establish a digital acquisition workflow that removes the paper or email-based communications
- Gain instant visibility into the Acquisition process from request to decision
- Plan their resource allocation more effectively

Streamline Manual Workflows

Acquisition Management Workflow removes the manual, email, and paper-based processes from the existing acquisition workflow and replaces it with an end-to-end solution designed to:

- Centralize key requirements, requests, and updates in one location
- Enable collaborate enterprise wide at each stage of the process
- Reduce the likelihood of delays, errors, or missed deadlines

Simplify Decision Making

In a manual or hybrid acquisition workflow, decision makers are forced to make quick, important decisions without being able to track incoming packages, gain insight into the request and review points, and are often times, left with inadequate time to make decisions. With Acquisition Management Workflow decision makers are able to:

- Track incoming packages during the request and review stages
- Alleviate the concern regarding quality of data and package arrival timelines
- Shift from a reactive acquisition process to a proactive process where decision makers know what is happening across their acquisition workflow

Ensure Audit Readiness & Mitigate Liability Exposure

Ensuring audit-readiness is time-consuming and complicated, often times, leaving room for liability and exposure. Acquisition Management Workflow helps organizations to:

- Store all acquisition information, discussions, and approvals in one centralized location
- Quickly and confidently acquire the necessary information to serve the audit requirements
- Establish a sustainable strategy for compliance management with a digital workflow designed with the compliance requirements in mind.
