

Inventory Management System Solution Overview

Increase Inventory Visibility & Tracking

The Inventory Management System removes the manual, email, and paper-based process from the existing inventory tracking and allocation process and replaces it with an end-to-end solution designed to:

- View equipment inventory storage, life cycle status, historical maintenance records, end-of-life replacements, and efficient allocation and tracking across modules
- Centralize information, requests, and updates in one location
- Improve executive decision-making capability due to increased access to trustworthy insights pertaining to inventory and equipment

Streamline Maintenance Processes

To preserve the quality and integrity of the inventory, maintenance and maintenance records must be well-documented and accessible. By using Inventory Management System, organizations are able to:

- Automate maintenance deadline processes
- Update and store maintenance records for all assets in inventory
- Effectively track loans and loan requests, as well as, the individual borrowing/using equipment

Regulate Quality Assurance Checklists

The system is designed to improve intra and inter-module communication which as a result, helps organizations:

- Improve quality assurance and maintenance information
- Foster engaging discussions to improve response times, pushing items forward
- Sustain maintenance activities regardless of employee turnover
